Q3200-RA/Q3400-RA XDR 800Gb/s InfiniBand Switch Systems User Manual

Table of contents

Relevant for Models: Q3200-RA and Q3400-RA

This manual describes the installation and basic use of the NVIDIA XDR InfiniBand switch systems based on the NVIDIA Quantum™-3 switch ASIC. This manual is intended for IT managers and system administrators.

Revision History

A list of the changes made to this document are provided in Document Revision History.

Introduction

The NVIDIA Quantum-3 family of fixed-configuration switches revolutionizes the performance, scalability, and efficiency of high-performance computing and AI infrastructures, enabling faster and more effective AI processing and computation. These switches are available in both 4U and 2U systems.

The NVIDIA Quantum-X800 Q3400-RA 4U switch, leverages 200Gb/s-per-lane serializer/deserializer (SerDes) technology. It features 144 ports at 800Gb/s distributed across 72 Octal Small Form-Factor Pluggable (OSFP) cages. The switch's high radix supports a two-level fat-tree topology capable of connecting up-to 10,368 ConnectX-8 network interface cards (NICs) with minimal latency and optimal job locality. The Q3400 is air-cooled.

For integration with existing NDR or HDR infrastructures, the NVIDIA Quantum-X800 Q3200 2U air-cooled configuration switch is ideal. This system houses two independent switches within a single enclosure, together providing 72 ports at 800Gb/s (over 36 OSFP cages).

Both the Q3400 and Q3200 switches include a dedicated InfiniBand in-band management port specifically for NVIDIA Unified Fabric Manager (UFM®) management, separated on the front panel from the other ports. This separation allows the full set of standard ports to be used for data network connectivity, simplifying port allocation and streamlining topology design.

Additionally, NVIDIA Quantum-X800 switches feature optional router capabilities, facilitating the expansion of InfiniBand clusters to support a large scale of nodes located across multiple sites.

The 4U switch systems are ideal for HPC and AI workloads, leveraging the cutting-edge NVIDIA Scalable Hierarchical Aggregation and Reduction Protocol (SHARP)™, alongside enhanced adaptive routing and performance isolation technologies. With this powerful combination, they deliver unparalleled performance for handling the most demanding tasks in HPC and AI domains. The NVIDIA Quantum-3 switches are available with internal management capabilities.

As a rack-mounted InfiniBand solution, the NVIDIA Quantum-3 switches provide maximum flexibility for various network topologies. They support a wide range of configurations, including Fat Tree, Dragonfly+, multi-dimensional Torus, and more. In these setups, the 4U systems act as spines, while the 2U systems serve as leaves, complementing the overall network architecture.

Speed and Switching Capabilities

The table below describes maximum throughput and interface speed per system model.

The 4U switches offer a radix of 144 ports of 800Gb/s on 72 physical octal small form-factor pluggable (OSFP) connectors

The 2U systems come with 72 (2 x 36) ports of 800 Gb/s and are ideal for small-scale platforms.

System Model	XDR 800Gb/s OSFP Interfaces	Max Throughput
Q3200-RA	72 XDR ports over 36 OSFP cages	57.6 Tb/s
Q3400-RA	144 XDR ports over 72 OSFP cages	115.2 Tb/s

Management Interfaces, PSUs and Fans

The table below lists the various management interfaces and available replacement parts per system model.

System Model	USB and I^2C	MGT	FNM - Fabric Management Port	Console	Replaceable PSU	Replaceable Fan
Q3200-RA	Front (USB 2.0 type A)	Front (2 ports)	Front	Front	Yes, 4	Yes, 5

System Model	USB and I^2C	MGT	FNM - Fabric Management Port	Console	Replaceable PSU	Replaceable Fan
Q3400-RA	Front (USB 2.0 type A)	Front (2 ports)	Front	Front	Yes, 8	Yes, 10

Features

For a full feature list, please refer to the system's product brief. Go to https://www.nvidia.com/en-us/networking/. In the main menu, click on Products > InfiniBand > Switch Systems , and select the desired product page.

Certifications

The list of certifications (such as EMC, Safety and others) per system for different regions of the world is located on the NVIDIA website at https://www.nvidia.com/en-us/networking/environmental-and-regulatory-compliance/.

Installation

System Installation and Initialization

Installation and initialization of the system require attention to the normal mechanical, power, and thermal precautions for rack-mounted equipment.

Note

The rack mounting holes conform to the EIA-310 standard for 19-inch racks. Take precautions to guarantee proper ventilation in order to maintain good airflow at ambient temperature.

Note

Due to thermal considerations, the switch systems must be installed in a horizontal position. do not install the systems vertically.

Incorrect	Correct
	

Incorrect	Correct
	

Note

- Unless otherwise specified, NVIDIA products are designed to work in an environmentally controlled data center with low levels of gaseous and dust (particulate) contamination.
- The operation environment should meet severity level G1 as per ISA 71.04 for gaseous contamination and ISO 14644-1 class 8 for cleanliness level.

The installation procedure for the system involves the following phases:

Step	Procedure	See
1	Follow the safety warnings	Safety Warnings
2	Pay attention to the air flow consideration within the system and rack	Air Flow
3	Make sure that none of the package contents is missing or damaged	Package Contents

Step	Procedure	See

Safety Warnings

Prior to the installation, please review the Safety Warnings. Note that some warnings may not apply to all models.

Safety warnings are provided in multiple languages for your convenience:

Note

Note that not all warnings may apply to all models.

- With the fan module removed power pins are accessible within the module cavity.

  Do not insert tools or body parts into the fan module cavity.

- For AC powered switch systems: Disconnecting one power supply only disconnects one module. To isolate the unit completely, all connected power supplies must be disconnected.

A readily accessible Listed branch circuit overcurrent protective device rated 20 A must be incorporated in the building wiring.

Acoustic Level Warning

The acoustic level listed in Specifications section represents product noise measured in accordance with ISO 7779 under nominal conditions. The actual noise level can vary depending on the installation conditions, including but not limited to the number of racks in the installation, the overall installation size, rack and other equipment material and noise levels, fan faults, room temperature, room configuration, and employee location in

relation to the equipment. The data-center owner should manage effective hearing conservation as per the OSHA standard to protect employees against over and extended exposure to noise.

噪音级别警告

规格部分中列出的噪音级别代表在标定条件下根据 ISO 7779 标准测量出的产品噪音。实际噪音级别可能因安装情况而异，影响因素包括但不限于安装所使用的机架数量、安装所占用的整体空间大小、机架和其他设备所使用的材料及其噪音水平、风扇故障、室温、房间布置以及员工与设备的相对位置。数据中心所有者应根据 OSHA 标准进行有效的听力保护管理，以便保护员工，使其听力免受过大噪音的伤害，并避免让员工长时间待在充满噪音的环境中。

Предупреждение об уровне шума

Уровень шума, указанный в разделе «Технические характеристики», представляет собой создаваемый изделием уровень шума, измеренный в соответствии со стандартом ISO 7779 в номинальных условиях. Фактический уровень шума может варьироваться в зависимости от условий установки, включая (но не ограниваясь этими данными) количество стоек в установке, общий размер установки, материалы, из которых изготовлены стойки и другое оборудование, уровни шума стоек, неисправности вентиляторов, температуру в помещении, конфигурацию помещения и расположение сотрудников относительно оборудования. Владелец дата-центра должен обеспечить эффективную защиту здоровья органов слуха в соответствии со стандартом OSHA и оградить сотрудников от чрезмерного и длительного воздействия шума.

Avertizare privind nivelul acustic

Nivelul acustic menționat în secțiunea Specificații reprezintă zgomotul produsului, măsurat în conformitate cu standardul ISO 7779, în condiții nominale. Nivelul real de zgomot poate varia în funcție de condițiile de instalare, inclusiv, dar fără limitare, numărul de stive din configurație, dimensiunea generală a configurației, materialul de fabricație al stivelor și al altor echipamente, precum și nivelurile de zgomot ale acestora, defectele ventilatoarelor, temperatura și designul încăperii, precum și poziția angajaților față de echipament. Proprietarul centrului de date trebuie să gestioneze eficient normele de protecție auditivă, conform standardului OSHA, pentru a proteja angajații împotriva expunerii prelungite la zgomot.

Upozorenje na akustičnu razinu

Akustična razina navedena u odjeljku Specifikacije predstavlja buku proizvoda izmjerenu u skladu s ISO 7779 pod nominalnim uvjetima. Stvarna razina buke može varirati ovisno o uvjetima instalacije, uključujući, ali ne ograničavajući se na broj stalaka u instalaciji, ukupnu veličinu instalacije, materijal stalka i druge opreme i razine buke, kvar ventilatora, sobnu temperaturu, raspored prostorija i položaj zaposlenika u odnosu na opremu. Vlasnik podatkovnog centra trebao bi upravljati učinkovitim očuvanjem sluha prema standardu OSHA kako bi zaštitio zaposlenike od prekomjerne i produžene izloženosti buci.

Avviso sul livello acustico

Il livello acustico indicato nella sezione Specifiche rappresenta il rumore del prodotto misurato in conformità allo standard ISO 7779 in condizioni nominali. Il livello di rumore effettivo può variare a seconda delle condizioni di installazione, tra cui, in via esemplificativa, il numero di rack nell'installazione, le dimensioni complessive dell'installazione, il materiale del rack e di altre apparecchiature e i livelli di rumore, i difetti delle ventole, la temperatura ambientale, la configurazione della stanza e la posizione del personale rispetto all'apparecchiatura. Il proprietario del data center dovrebbe adottare misure efficaci di protezione dell'udito secondo lo standard OSHA per tutelare i dipendenti dalla sovraesposizione al rumore.

Air Flow

Currently, the NVIDIA XDR systems are offered with one air flow pattern:

- Connector (front) side inlet to power side outlet - marked with red dots that are placed on the power inlet side.

  Air Flow Direction Marking - Connector Side Inlet to Power Side Outlet

⚠ Warning

- All servers and systems in the same rack should be planned with the same airflow direction.
- All FRU components need to have the same air flow direction. A mismatch in the air flow will affect the heat dissipation.

Package Contents

Before installing your new system, unpack it and check against the parts list below that all the parts have been sent. Check the parts for visible damage that may have occurred during shipping.

The Q3200-RA and Q3400-RA package content is as follows:

- 1 – System
- 1 – Rail kit
- 1 - Harness: HAR000631 – Harness RS232 2M cable – DB9 to RJ-45
- OSFP thermal caps:
    - 37caps in Q3200-RA
    - 73 caps in Q3400-RA

Note

Power cords are not included in the system's package.

Note

If anything is damaged or missing, contact your sales representative at Networking-support@nvidia.com.

19” System Mounting Options

By default, the Q3200-RA and Q3400-RA systems are shipped with the rail kits described in Q3200-RA Tool-Less Rail Kit and Q3400-RA Tool-Less Rail Kit, respecivly.

Prerequisites:

Before mounting the system to the rack, select the way you wish to place the system. Pay attention to the airflow within the rack cooling, connector and cabling options.

While planning how to place the system, review the two installation options shown in the table below, and consider the following points:

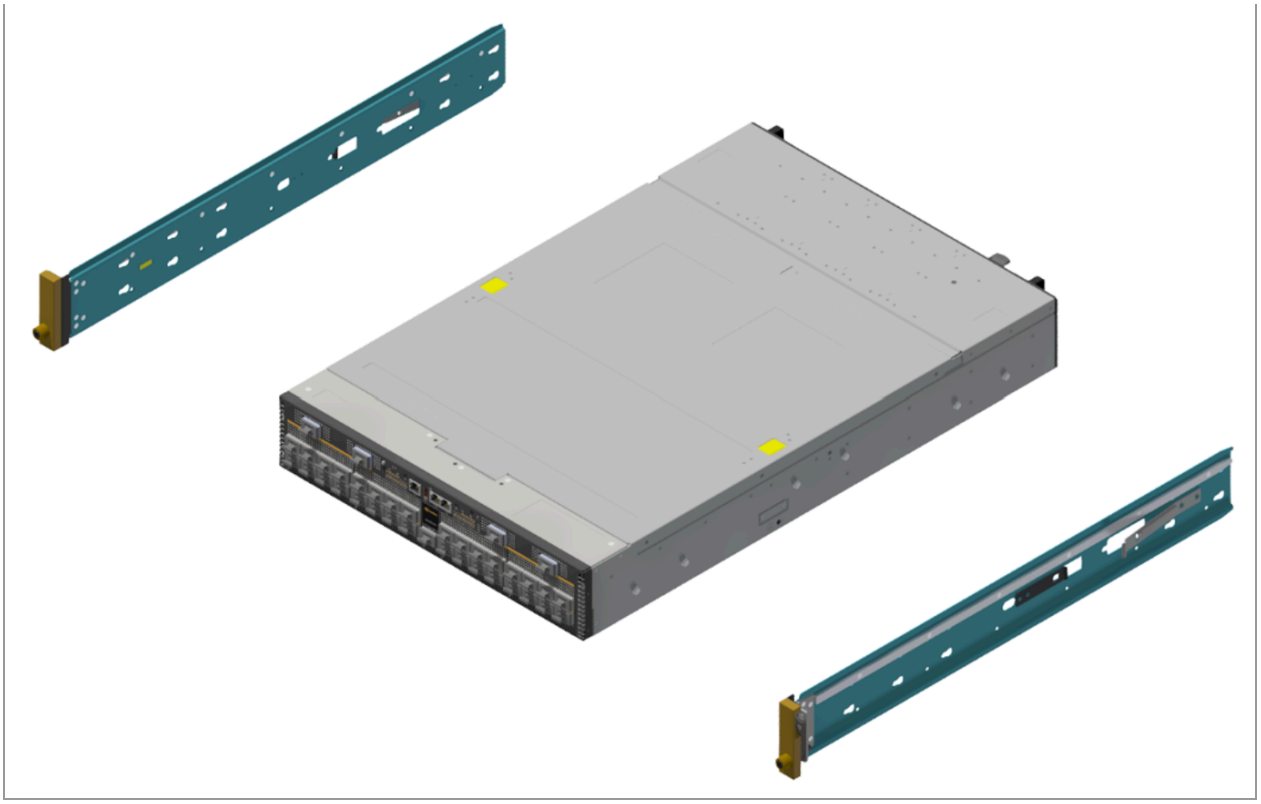
- Make sure the system air flow is compatible with your installation selection. It is important to keep the airflow within the rack in the same direction.
- Note that the part of the system to which you choose to attach the rails (the front panel direction, as demonstrated in Option 1 or the FRUs direction, as demonstrated in Option 2) will determine the system's adjustable side. The system's part to which the brackets are attached will be adjacent to the cabinet.
- The FRUs, as well as high-speed and MNG cables, must be extracted for replacement as part of the switch service. Consider this when planning the switch installation.|

Note

The following steps include illustrations that show front side (ports) installation, yet all instructions apply to all installation options.

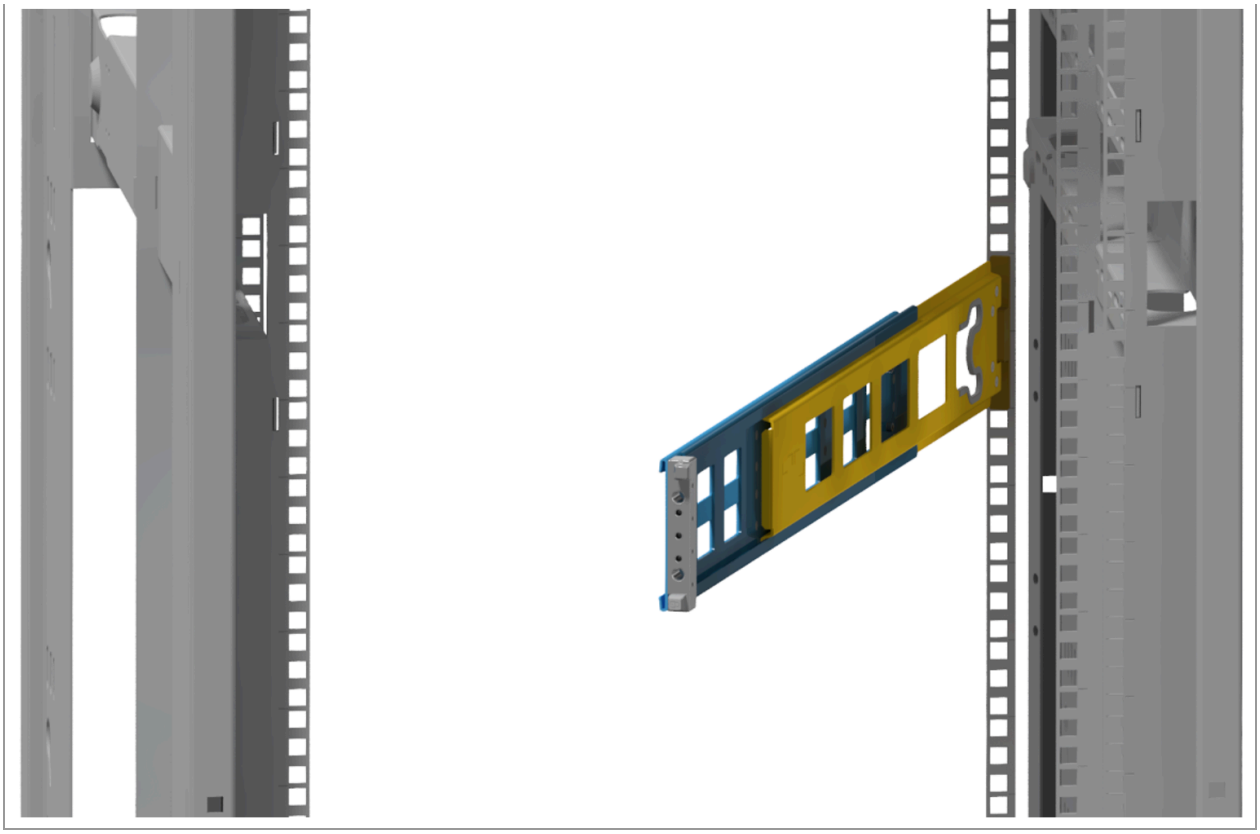
1. Attach the system's rails (A) to the switch chassis. Secure the assembly by gently pushing the rails' pins through the slider key holes, until locking occurs.

Attaching the System's Rails to the Switch Chassis



2. Mount both of the rack rails (B) into the rack by angularly inserting the brakes located at the rails edges into the designated slots in the rack unit, as shown in the following figure:

Angularly Inserting the Brakes Located at the Rails Edges into the Designated Slots in the Rack Unit



3. Align both rack rails (B) to sit horizontally in parallel to the rack assembly. By straightening the rails' angular position, their breaks will be caught and locked in the rack's slots.

4. Pull the rack rails' telescopic extensions all the way to the rack's opposite side, and insert the latches at the rails' free edges to the rack's slots. A click should be heard as the spring latches are fully inserted and locking occurs.

To mount the system into the rack:

> **⚠ Warning**
>
> At least two people are required to safely mount the system in the rack.

5. While your installation partner is supporting the system's weight, slide the rails installed on the system into the channels in the rack rails, and push them forward until the locking mechanism is activated on both sides and a click is heard.

6. Tighten the captive screws on both sides to further secure the system to the rack's posts.

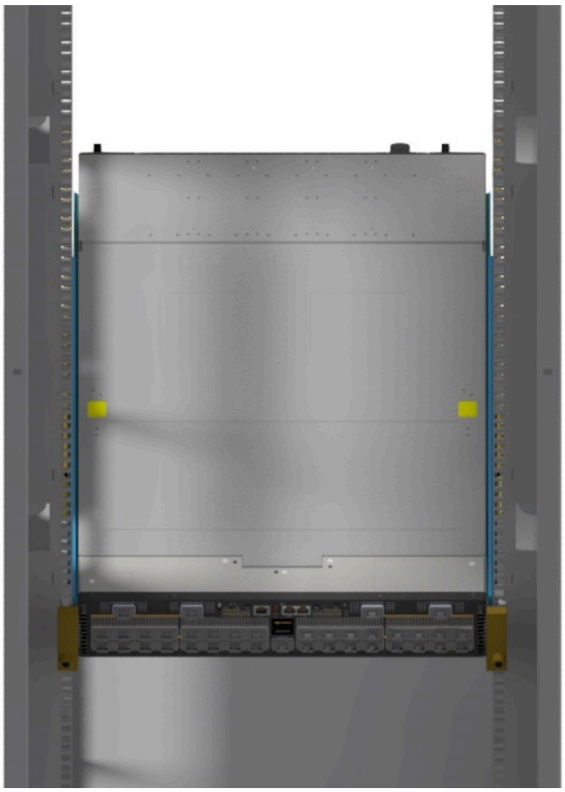
Tightening the Captive Screws



To remove the system from the rack:

1. Turn off the system and disconnect it from peripherals and from the electrical outlet.

While your installation partner is supporting the system’s weight:

1. Loosen the captive screws attaching the system's rails to the rack's posts.
2. Use two hands to pull the system out until the rails are stopped.
3. Press the locking buttons on both sides of the rack, and continue to pull the system out until the rack rails are clear of the system's rails.
4. Remove the rails from the system. Release the metal latches and pull out the rails, so the system's pins will be removed out of the designated slots.

Prerequisites:

Before mounting the system to the rack, select the way you wish to place the system. Pay attention to the airflow within the rack cooling, connector and cabling options.

While planning how to place the system, review the two installation options shown in the table below, and consider the following points:

- Make sure the system air flow is compatible with your installation selection. It is important to keep the airflow within the rack in the same direction and avoid blocking the air flow.
- The FRUs, as well as high-speed and MNG cables, must be extracted for replacement as part of the switch service. Consider this when planning the switch installation.|

The following steps details the installation process:

1. Install both rack rails (A) by inserting their pins to the designated key holes in the rack, and aligning them in an angular position.

Cable Installation

Power Cable and Cable Retainer

In some switch models, the product's package includes cable retainers. It is highly recommended to use them in order to secure the power cables in place.

When installing retainers for the PSUs of the switch systems, please adhere to the following instructions:

1. Verify the integrity of the retainer assembly, as demonstrated in the below table:- The snaps' push-pins must have visible edges with no broken or torn parts.

   - The shoulders' pins should be in-tact and must not be bent inwards.

Proper Condition	Improper Condition

Proper Condition	Improper Condition
	

2. It is advised to place the PSU on a flat, stable surface. While you secure the PSU in place, use two thumbs to insert the retainer's two snaps into the designated holes located near the AC inlet. Make sure that the retainer's plastic loop is facing upwards, as demonstrated in the below table.

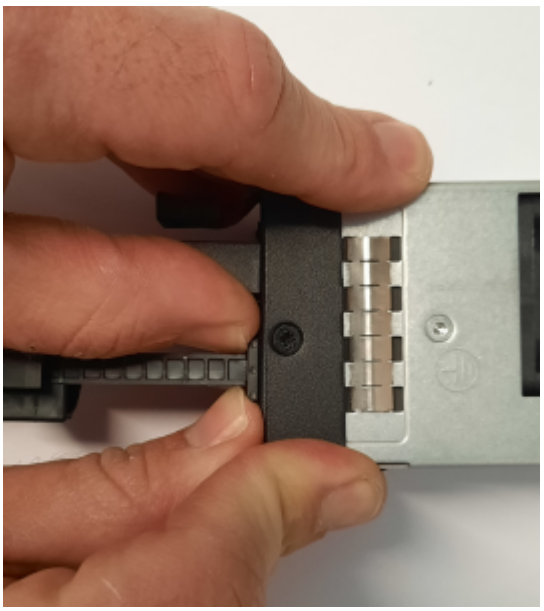
> **Note**
>
> For demonstration purposes, the images in this document show C2P (Connector-to-Power) airflow PSUs with red latches, yet the instructions apply to P2C (Power-to-Connector) PSUs with blue latches as well.

Correct Insertion	Incorrect Insertion

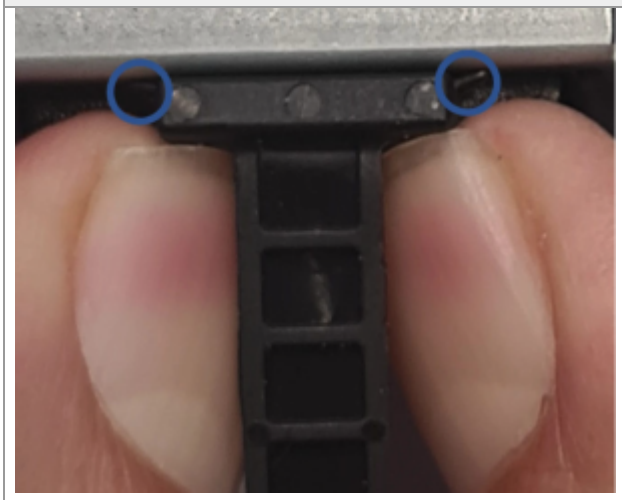
Correct Insertion	Incorrect Insertion
	

3. Push the retainer until the shoulders' pins (in blue circles below) are open and aligned with the PSU front panel, as shown in the following table:

Fully Mated Retainer



Fully Mated Retainer



4. Make sure that the retainer is fully locked in place by gently attempting to pull it outwards.

5. Open the plastic loop and route the AC cord through it. Locate the loop over the AC cord, as shown in the following table, and fasten it tightly.

Proper Loop Placement	Improper Loop Placement
	

Note

Each cable retainer can be used once only. Once the retainer has been fully inserted and the shoulders' pins have been adjusted, the retainer

cannot be used again, and should be discarded if pulled out.

Port Cables

All cables can be inserted or removed with the unit powered on.

To insert a cable, press the connector into the port receptacle until the connector is firmly seated. The LED indicator, corresponding to each data port, will light when the physical connection is established. When a logical connection is made, the relevant port LED will turn on.

To remove a cable, disengage the locks and slowly pull the connector away from the port receptacle. The LED indicator for that port will turn off when the cable is unseated.

For full cabling guidelines, ask your NVIDIA representative for a copy of *NVIDIA Cable Management Guidelines and FAQs Application Note.*

For more information about port LEDs, refer to Port LEDs.

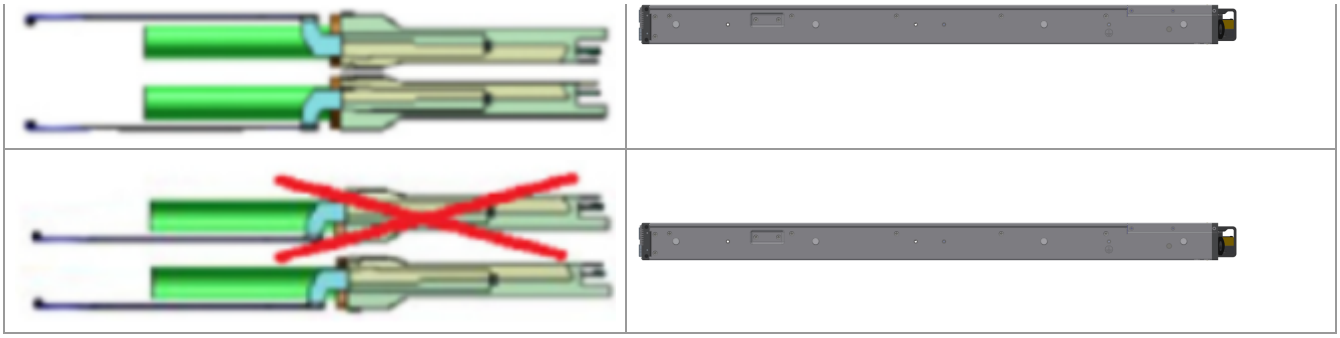
Warning

Do not force the cable into the cage with more than 40 newtons/9.0 pounds/4kg force. Greater insertion force may cause damage to the cable or to the cage.

Note

Unused OSFP cages must be closed with the thermal caps supplied with the system.
images/download/thumbnails/3201684916/image2021-12-1_11-35-14-version-1-modificationdate-1727603600013-api-v2.png

Cable Orientation



Splitter (Breakout) Cables and Adapters

In the XDR systems, a single OSFP cage contains 2 XDR ports. This maximizes flexibility by enabling end users to use a combination of dual-lane and quad-lane interfaces according to the specific requirements of their network. For the systems splitting options, see Splitting Options below.

For the Q3200 switch system:

Splitting a port changes the notation of that port from x/y/z to x/y/z/i, with “x/y/z” indicating the previous notation of the port prior to the split, and “i” indicating the number of the resulting single-lane port (1,2). Each sub-physical port is then handled as an individual port. For example, splitting port 1/5/1 into 2 lanes results in ports 1/5/1/1 and 1/5/1/2. For full notation schematics, see Port Notation Schematics.

For the Q3400 switch system:

Splitting a port changes the notation of that port from x to x/y, with “x” indicating the previous notation of the port prior to the split, and “y” indicating the number of the resulting XDR port. Each XDR port is then handled as an individual port. For example, splitting port 1 into 2 ports results in ports 1/1 and 1/2. For full notation schematics, see Port Notation Schematics.

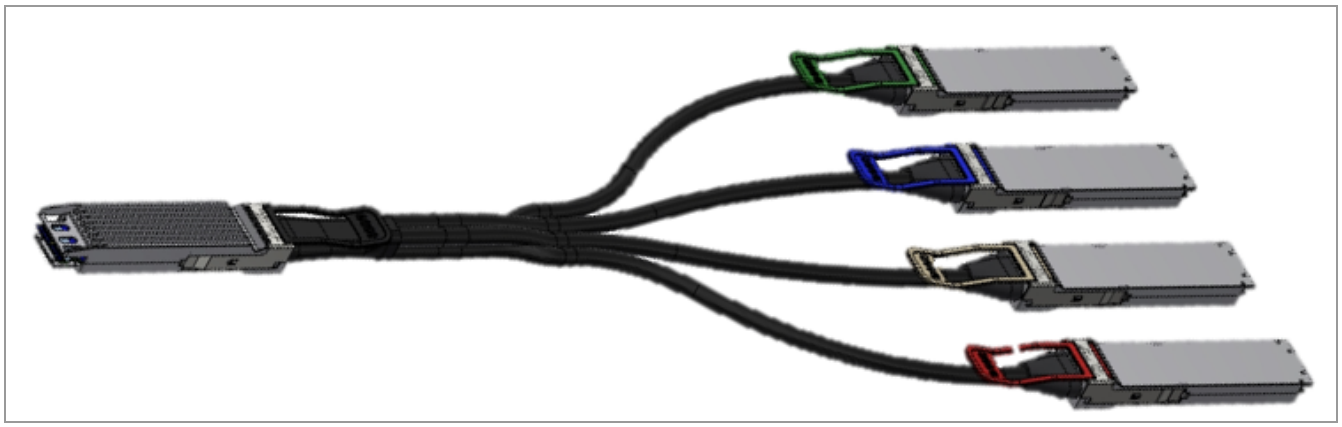
Note

The following behavior should be expected when disconnecting a 1:2 splitter cable (from cages in both the upper and lower rows):

- When you disconnect a cable marked as “1”, the CLI <cage number>/1 will always go down, and the left LED of the cage will be turned off.

- When you disconnect the cable marked as “2”, the CLI <cage number>/2 will always go down, and the right LED of the cage will be turned off.

Breakout Cable Example



Tip

- Splitting the interface deletes all configuration on that interface.
- In order to be able to use this feature, the system profile command must be activated with split-ready configuration (cross-reference to system profile command).
- Changes will take effect after reset. In order to reset an unmanaged switch, please reboot the switch, or run `flint -d <device> swreset`.

For more information on how to change the system’s profile to allow Split-Ready configuration, how to change the module type to a split mode, and how to unsplit a split port when using the switch systems, please refer to the "InfiniBand Switching" chapter in the latest *MLNX-OS® User Manual*.

> It may take up to five minutes to turn on the system. If the System Status LED shows amber after five minutes, unplug the system and call your NVIDIA representative for assistance.

3. Check the frontal System Status LEDs and confirm that all of the LEDs show status lights consistent with normal operation (initially flashing, and then moving to a steady color) as shown below. For more information, refer to LED Notifications.

System Bring-Up of Managed Systems

This quick start guide provides an end-to-end setup process for installing and running NVOS.

Note

Before running NVUE commands, please refer to the NVIDIA User Experience (NVUE) section in the NVIDIA NVOS User Manual for InfiniBand Switches.

Note

NVOS supports configurations through NVUE only. Running Linux commands or directly modifying underlying Linux files might result in undefined behavior.

Prerequisites

This guide requires an intermediate-level Linux knowledge. An understanding of text editing, Unix file permissions, and process monitoring is necessary. A variety of text editors are pre-installed, including `vi` and `nano`.

Access to a Linux or UNIX shell in needed. For Windows users, employing a Linux environment like Cygwin as your command line tool is recommended for interacting with NVOS.

Note

If moving from MLNX-OS to NVOS operating system, please refer to the following appendix: Moving from MLNX-OS to NVOS NVIDIA NVOS User Manual for InfiniBand Switches.

Get Started

NVOS provides two methods for initial provisioning:

- Zero-Touch Provisioning (ZTP) (for more information, see the Zero-Touch Provisioning section in the NVIDIA NVOS User Manual for InfiniBand Switches)
- Manual Provisioning

Manual Provisioning

When starting NVOS for the first time, the management port send a DHCP request. To determine the IP address of the switch, you can cross reference the MAC address of the switch with your DHCP server. The MAC address is typically located on the side of the switch or on the box in which the unit ships.

Login Credentials

The default installation includes two accounts:

- The user account (admin) has `sudo` privileges. The admin account uses the default password `admin`.
- The user account (monitor) has `read only` privileges. The monitor account uses the default password `monitor`.

Upon first login, it will be required to change the default passwords for the admin and monitor accounts. The new password must comply with the default password hardening rules (see Password Hardening section in the NVIDIA NVOS User Manual for InfiniBand Switches).

The new configured password is treated like any other configuration. If the configuration is not saved, the user will need to reconfigure it upon the system's next boot.

```
You are required to change your password immediately
(administrator enforced).
```

```
WARNING: Your password has expired.
You must change your password now!
New password:
Retype new password:
```

In this quick start guide, use the *admin* account to configure NVOS.

All accounts except root can use remote SSH login. Note that the default SSH auto-logout is 15 minutes.

NVOS supports multiple services to authenticate users and authorize switch tasks, both local and remote authentication/authorization methods.

For more information, please refer to Authentication Authorization and Accounting section in the NVIDIA NVOS User Manual for InfiniBand Switches.

Serial Console Management

It is recommended to perform management and configuration over the network, either in-band or out-of-band. A serial console is fully supported.

Typically, switches ship from the manufacturer with a mating DB9 serial cable. Switches with ONIE are always set to a 115200 baud rate.

Recommended Serial Connection Settings

Parameter	Setting
Baud Rate	115200
Data bits	8
Stop bits	1
Parity	None

Parameter	Setting
Flow Control	None

Wired Ethernet Management

An NVOS switch always provides two dedicated Ethernet management port called eth0 and eth1. This interface is specifically for out-of-band management use. The management interface uses DHCP for addressing by default.

Set Static IP Address

To set a static IP address, run the following (ipv6 supported as well):

```
admin@nvos:~$ nv set interface eth0 ip address 192.0.2.42/24
admin@nvos:~$ nv set interface eth0 ip gateway 192.0.2.1
admin@nvos:~$ nv config apply
```

> **Note**
>
> Configuring static IP address will trigger unsolicited announcement messages to the gateway in order to reveal the devices's MAC address.

Configure the Hostname

The hostname identifies the switch; as such, make sure the hostname is configured in a unique and descriptive way. For more information, see Hostname section in the NVIDIA NVOS User Manual for InfiniBand Switches.

Configure the System Clock

NVOS relies on the system clock for displaying the time and timestamping messages. User can control the system time zone and clock settings.

Manual Settings

Time Zone

Default time zone is set to Coordinated Universal Time (UTC). User may change the time zone configuration by executing the following:

```
admin@nvos:~$ nv set system timezone Etc/UTC
admin@nvos:~$ nv config apply
```

Clock

The system date and time can be manually changed. NTP servers configured on the switch will supersede any manually entered date-time settings.

```
admin@nvos:~$ nv action change system date-time 2024-12-24 10:25:13
```

NTP

NVOS supports Network Time Protocol (NTP) for synchronizing the time of the system. For more information see Network Time Protocol section in the NVIDIA NVOS User Manual for InfiniBand Switches

NTP Servers from DHCP

By default, NTP will obtain the NTP servers from DHCP. It is possible to disable it by executing the following:

```
admin@nvos:~$ nv set system ntp dhcp disabled
admin@nvos:~$ nv config apply
```

Configure NTP Servers

A new NTP server can be added by executing the following:

```
admin@nvos:~$ nv set system ntp server 10.11.100.5
admin@nvos:~$ nv config apply
```

NTP can be configured to accept packets coming from an authenticated source only.

NTP authentication is disabled by default.

An authentication key may be created and used to authenticate incoming NTP packets. To ensure the key is utilized, the following conditions must be met:

- Enable NTP authentication

  ```
  admin@nvos:~$ nv set system ntp authentication enabled
  admin@nvos:~$ nv config apply
  ```

- Add a new NTP key, and associate it with the server:

  ```
  admin@nvos:~$ nv set system ntp key 15 value SECRET
  admin@nvos:~$ nv set system ntp key 15 trusted yes
  admin@nvos:~$ nv set system ntp server 10.11.100.5 key 15
  admin@nvos:~$ nv config apply
  ```

- NTP server must use the same key.

NVOS support various attributes for NTP servers and keys, for more infomation please see NTP Commands section in the NVIDIA NVOS User Manual for InfiniBand Switches.

Configure Syslog Servers

User can configure the system to send syslog logs to a centralized logging server (one or more):

```
admin@nvos:~$ nv set system syslog server 10.20.30.40
admin@nvos:~$ nv config apply
```

For more syslog configurations, please see Remote Logging section in the NVIDIA NVOS User Manual for InfiniBand Switches .

Test Cable Connectivity

By default, NVOS enables all data plane ports (every InfiniBand port).

To view link status, run the `nv show interface` command or `nv show platform transceiver`.

Warning

When running NVUE commands to configure the switch, run the `nv config save` command before you reboot. The command saves the applied configuration to the startup configuration so that the changes persist after the reboot.

```
admin@nvos:~$ nv config save
```

Configure Connection-Mode In an InfiniBand Interface

The connection-mode attribute indicates to which peer this port is connected. This feature is dedicated to Q3200-RA system which can be connected to NDR systems (or older) and to XDR systems.

In case the port is connected to XDR systems, the connection-mode should be XDR. If it connected to NDR system, the connection-mode should be NDR. By default, all the ports are configured to connection-mode XDR.

When connecting port to NDR system, the port connection-mode needs to be changed with the set command (nv set interface link connection-mode) to 'ndr' in order to have link up with full bandwidth. Changing port connection-mode will move the port to down and up again when configuration ends.

FRU Replacements

Power Supply

NVIDIA systems are equipped with replaceable power supply units which work in a redundant configuration (2x for Q3200, 4x for Q3400). Either unit may be extracted without bringing down the system.

> ⚠ **Warning**
>
> Make sure that the power supply unit that you are NOT replacing is showing all green, for both the power supply unit and the rear System Status LEDs.

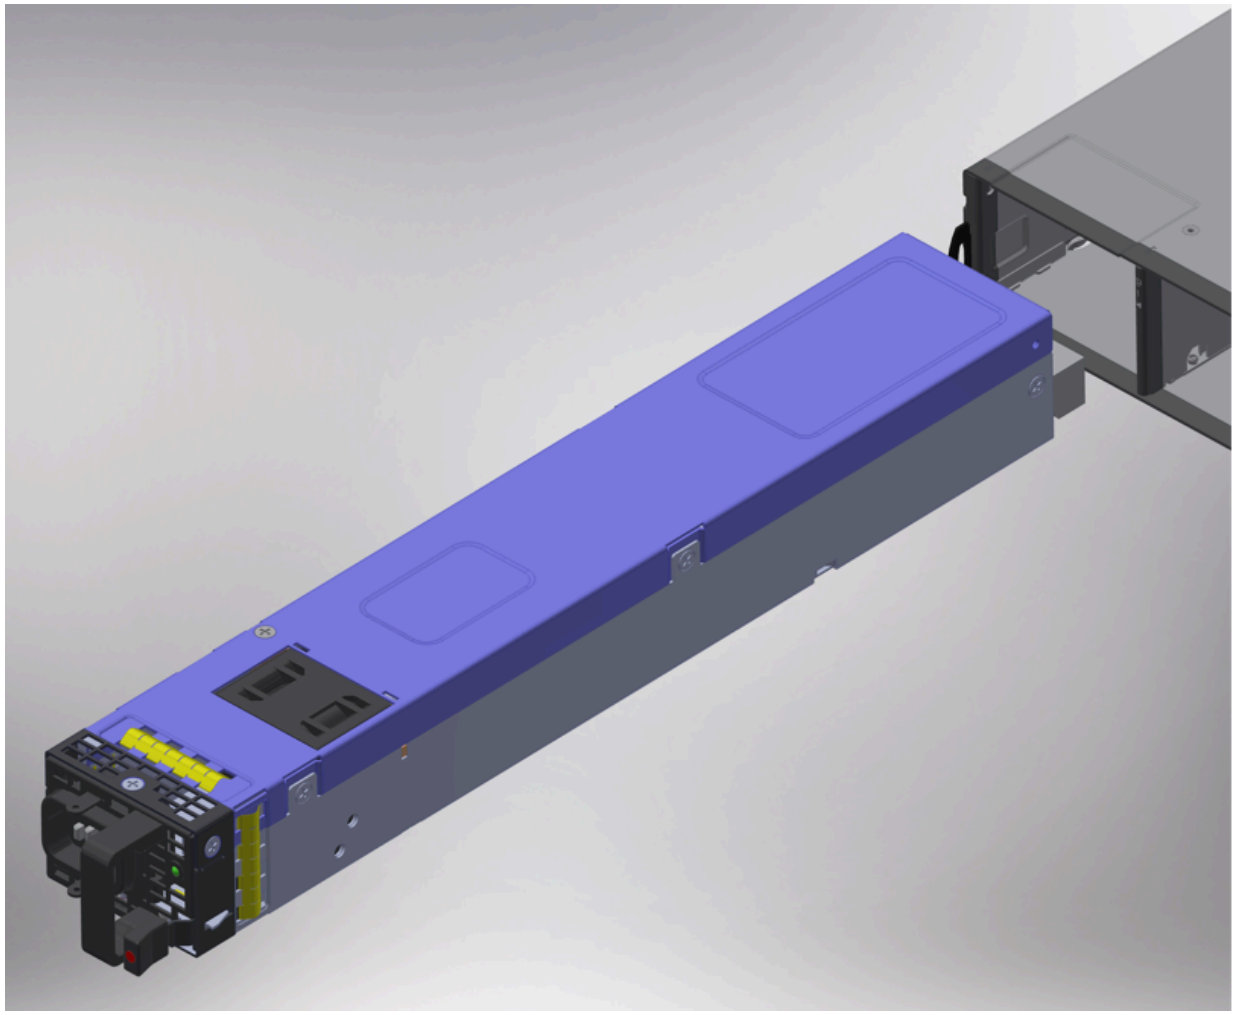
> ⚠ **Warning**
>
> Power supply units have directional air flows similar to the fan module. The fan module airflow must coincide with the airflow of all of the power supply units. If the power supply unit airflow direction is different from the fan module airflow direction, the system’s internal

temperature will be affected. For power supply unit air flow direction, refer to Air Flow.

To extract a power supply unit:

1. Remove the power cord from the power supply unit.
2. Grasping the handle with your hand, push the latch release with your thumb while pulling the handle outward. As the power supply unit unseats, the power supply unit status LEDs will turn off.
3. Remove the power supply unit.

PS Unit Pulled Out



To insert a power supply unit:

1. Make sure the mating connector of the new unit is free of any dirt and/or obstacles.

> ⚠ **Warning**
>
> Do not attempt to insert a power supply unit with a power cord connected to it.

2. Insert the power supply unit by sliding it into the opening, until a slight resistance is felt.
3. Continue pressing the power supply unit until it seats completely. The latch will snap into place, confirming the proper installation.
4. Insert the power cord into the power supply connector.
5. Insert the other end of the power cord into an outlet of the correct voltage.

> ⚠ **Warning**
>
> The green power supply unit indicator should light. If it does not, repeat the whole procedure to extract the power supply unit and re-insert it.

Fans

The system can fully operate if one fan FRU is dysfunctional. Failure of more than one fan is not supported.

> ⚠ **Warning**
>
> Make sure that the fans have the air flow that matches the model number. An air flow opposite to the system design will cause the

system to operate at a higher (less than optimal) temperature. For power supply unit air flow direction, refer to Air Flow.

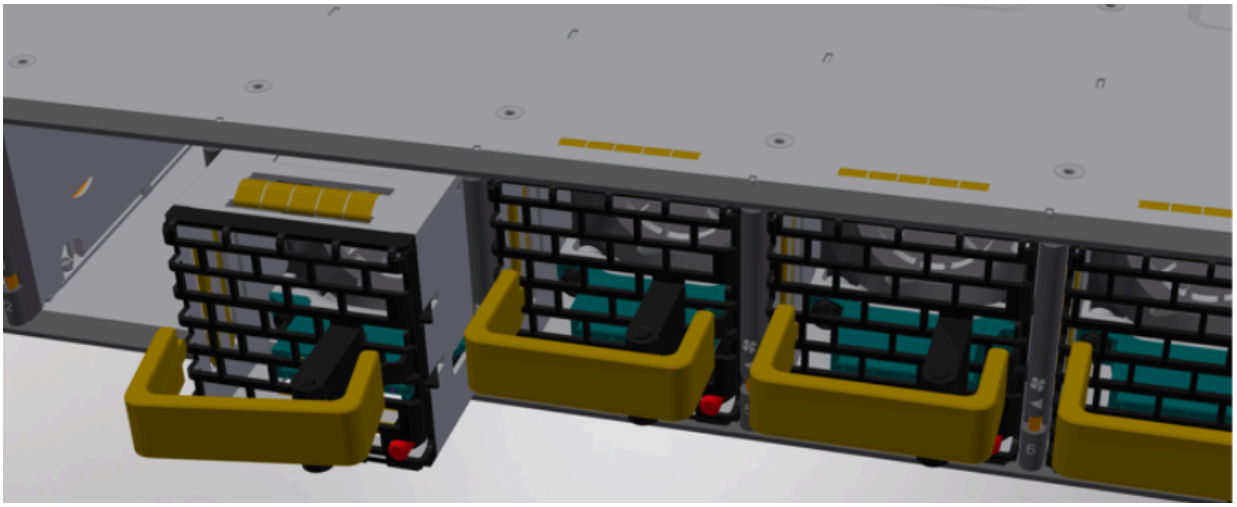
To extract a fan unit:

Note

When replacing a faulty fan unit in an operational switch system, do not leave the slot unpopulated for more than 60 seconds.

1. Extract the fan by pulling the gold handle outwards. As the fan unit unseats, its status LEDs will turn off.
2. Remove the fan unit by gently pulling out its handle while pushing the latch release with your index finger.

Fan Module Latches



To insert a fan unit:

1. Make sure the mating connector of the new unit is free of any dirt and/or obstacles.
2. Insert the fan unit by sliding it into the opening until slight resistance is felt. Continue pressing the fan unit until it seats completely.

⚠ Warning

The green Fan Status LED should light. If not, extract the fan unit and reinsert it. After two unsuccessful attempts to install the fan unit, power off the system before attempting any system debug.

NVOS

NVOS is the networking operating system that manages the NVLink switches. NVOS provides various interfaces and management protocols that allow the user to control and monitor the switches. Documentation for NVOS will be available via the NVONLINE system.

For more information on software management, refer to NVIDIA NVOS User Manual for InfiniBand Switches.

Interfaces

The systems support the following interfaces:

- Data interfaces - InfiniBand
- 10/100/1000Mb Ethernet management interface (RJ45)*
- USB port (2.0 type A)*
- RS232 Console port (RJ45)**
- I²C interface*
- FNM - Fabric Network Management Port
- Reset button
- Status and Port LEDs

*This interface is not found in managed systems.

**This interface is not found in externally managed systems.

In order to review the full configuration options matrix, refer to Management Interfaces, PSUs and Fans.

Data Interfaces

The data interfaces use OSFP connectors. The full list of interfaces per system is provided in Speed and Switching Capabilities.

Each OSFP port consists of 4 logical InfiniBand ports, and can be connected with OSFP cable or connector for 40/56/100/200/400/800Gb/s in Q3200-RA, and for 400/800Gb/s in Q3400-RA. The systems offer Class 8 (33W) OSFP224 transceivers support.

Speed

InfiniBand speed is auto-adjusted by the InfiniBand protocol. NVIDIA systems support QDR/FDR/EDR/HDR/NDR/XDR InfiniBand.

- FDR is an InfiniBand data rate, where each lane of a 4X port runs a bit rate of 14.0625Gb/s with 64b/66b encoding, resulting in an effective bandwidth of 56.25Gb/s.
- EDR is an InfiniBand data rate, where each lane of a 4X port runs a bit rate of 25Gb/s with 64b/66b encoding, resulting in an effective bandwidth of 100Gb/s.
- HDR is an InfiniBand data rate, where each lane of a 4X port runs a bit rate of 50Gb/s with 64b/66b encoding, resulting in an effective bandwidth of 200Gb/s.
- NDR is an InfiniBand data rate, where each lane of a 4X port runs a bit rate of 100Gb/s with 64b/66b encoding, resulting in an effective bandwidth of 400Gb/s.
- XDR is an InfiniBand data rate, where each lane of a 4X port runs a bit rate of 200Gb/s with 64b/66b encoding, resulting in an effective bandwidth of 800Gb/s.

RS232 (Console)

Note

The RS232 serial “Console” port is labeled images/download/thumbnails/3563322759/image2019-3-5_16-50-5-version-1-modificationdate-1738596486340-api-v2.png .

The Console port is an RS232 serial port on the front side of the chassis that is used for initial configuration and debugging. Upon first installation of the system, you need to connect a PC to this interface and configure network parameters for remote connections. Refer to Configuring Network Attributes to view the full procedure.

Note

This interface is not found in externally managed systems.

Management

Note

The RJ45 Ethernet “MGT” port is labeled images/download/thumbnails/3563322759/image2019-3-5_16-52-4-version-1-modificationdate-1738596485810-api-v2.png .

The Management RJ45 Ethernet ports provide access for remote management. The management ports are configured with auto-negotiation capabilities by default (100MbE to 1GbE). The management ports’ network attributes (such as IP Address) need to be pre-configured via the RS232 serial console port or by DHCP before use. Refer to Configuring Network Attributes to view the full procedure.

Note

This interface is not found in externally managed systems.

USB

The USB interface is USB 2.0 type A compliant and can be used by MLNX-OS software to connect to an external disk for software upgrade or file management.

Note

- USB 1.0 is not supported.

- Do not use excessive force when inserting or extracting the USB disk to and from the connector.
- This interface is not found in externally managed systems.

I²C

The I²C connector is combined with the USB connector, and is located on the front side of the system. It can be used with the I²C DB9 to micro USB splitting harness.

Note

- This interface is not found in managed systems.
- Apart from the initial configuration, I²C interface is made exclusively for debugging and troubleshooting. Only FAEs are authorized to connect through it.

Warning

Only original NVIDIA cables supplied with the switch package can be used to connect a switch system to the server.

Connecting any cable other than the NVIDIA supplied console cable may cause an I²C hang. Using uncertified cables may damage the I²C interface.

Refer to the Accessory and Replacement Parts appendix for harness details.

FNM - Fabric Network Management Port

The FNM port is a separate OSFP InfiniBand in-band management port. It enables accessing the UFM platform that allows data center operators to efficiently monitor and operate the entire fabric.

> **Note**
>
> Since the FNM port is semi-populated (only the first four lanes of it are wired), it functions as an HDR port.

* The 980-9IAH1-00XM00 transceiver supports a 4x100 Gb/s configuration with a planarized port design.

Reset Button

The reset button is located on the front side of the system. It is a red button that requires a tool to be pressed.

⚠ **Warning**

Do not use a sharp pointed object such as a needle or a push pin for pressing the reset button. Use a flat object to push the reset button.

- To reset the system, push the reset button for less than 15 seconds.
- When using an Onyx (MLNX-OS) based system, keeping the reset button pressed for more than 15 seconds will reset the system and the “admin” password, this should allow you to enter without a password and set a new password for the user “admin”.

LEDs

See LED Notifications.

LED Notifications

The system’s LEDs are an important tool for hardware event notification and troubleshooting.

LEDs Symbols

Symbol	Name	Description	Normal Conditions
	System Status LED	Shows the health of the system.	Green/Flashing green when booting
	Power Supply Units LEDs	Shows the health of the power supply units.	Green
	Fan Status LED	Shows the health of the fans.	Green
	Unit Identifier LED	Lights up on command through the CLI.	Off or blue when identifying a port

System Status LED

System Status LED* - Front Side (Marked red):

Front Panel

*The shape and order of the LEDs and their icons may slightly vary between different system models.

> ⚠ **Warning**
>
> It may take up to five minutes to turn on the system. If the System Status LED shows amber after five minutes, unplug the system and call your NVIDIA representative for assistance.

System Status LED Assignments

LED Behavior	Description	Action Required
Solid Green	The system is up and running normally.	N/A

LED Behavior	Description	Action Required
Flashing Green	The system is booting up. This assignment is valid on managed systems only.	Wait up to five minutes for the end of the booting process.
Solid Amber	Major error has occurred. For example, corrupted firmware, system is overheated, etc.	If the System Status LED shows amber five minutes after starting the system, unplug the system and call your NVIDIA representative for assistance.

Fan Status LED

Fan Status Front LED Assignments

LED Behavior	Description	Action Required
Solid Green	All fans are up and running.	N/A
Solid Amber	Error, one or more fans are not operating properly.	The faulty FRUs should be replaced.

Fan Status Rear LED Assignments (One LED per Fan)

LED Behavior	Description	Action Required
Solid Green	A specific fan unit is operating.	N/A
Solid Amber	A specific fan unit is missing or not operating properly.	The fan unit should be replaced.

⚠ Warning

Risk of Electric Shock! With the fan module removed, power pins are accessible within the module cavity. Do not insert tools or body parts into the fan module cavity.

Power Supply Status LEDs

There are extra power supply inlets in the system (for redundancy). The system cannot operate with only one power supply connected. Each power supply unit has a single 2 color LED that indicates the status of the unit.

LED Behavior	Description	Action Required
Solid Green	All plugged (one or two) power supplies are running normally.	N/A
Solid Amber	One or both of the power supplies are not operational or not powered up/ the power cord is disconnected.	Make sure the power cord is plugged in and active. If the problem resumes, the FRUs might be faulty, and should then be replaced.

The power supply status LEDs on the rear side of the system are located on the PSUs themselves. Each PSU has a single 2 color LED.

Power Supply Unit Status Rear LED Assignments

LED Behavior	Description	Action Required
Solid Green	All PS units are connected and running normally.	N/A
Flashing Green 1Hz	AC present / Only 12VSB on (PSU off) or PSU in Smart-on state.	Call your NVIDIA representative for assistance.

LED Behavior	Description	Action Required
Amber	AC cord unplugged or AC power lost while the second power supply still has AC input power.	Plug in the AC cord of the faulty PSU.
	PS failure (including voltage out of range and power cord disconnected).	Check voltage. If OK, call your NVIDIA representative for assistance.
Flashing Amber	Power supply warning events where the power supply continues to operate; high temp, high power, high current, slow fan.	Call your NVIDIA representative for assistance.
Off	No AC power to all power supplies.	Call your NVIDIA representative for assistance.

Unit Identification LED

The UID LED is a debug feature, that the user can use to find a particular system within a cluster by turning on the UID blue LED.

To activate the UID LED on a switch system, run:

```
switch (config) # led MGMT uid on
```

To verify the LED status, run:

```
switch (config) # show leds
Module LED Status
------------------------------------------------------------------
---------
MGMT UID Blues
```

To deactivate the UID LED on a switch system, run:

```
switch (config) # led MGMT uid off
```

Port LEDs

The port LEDs behavior indicates the ports' state, as detailed in the following table:

Port LEDs in InfiniBand System Mode

LED Behavior	Description	Action Required
Off	Link is down.	Check the cable.
Solid Green	Link is up with no traffic.	N/A
Flashing Green	Link is up with traffic.	N/A
Solid Amber	Link is up.	Wait for the Logical link to raise. Check that the SM is up.
Flashing Amber	A problem with the link.	Check that the SM is up.

In InfiniBand system mode, the LED indicator, corresponding to each data port, will light orange when the physical connection is established (that is, when the unit is powered on and a cable is plugged into the port with the other end of the connector plugged into a functioning port). When a logical connection is made the LED will change to green. When data is being transferred the light will blink green.

Note

The system supports an additional OSFP port - FNM (Fabric Network Management). This port has a dedicated LED, as shown in the below figure.

Troubleshooting

Problem Indicator	Symptoms	Cause and Solution
LEDs	System Status LED is blinking for more than 5 minutes	Cause: MLNX-OS software did not boot properly and only firmware is running. Solution: Connect to the system via the console port, and check the software status. You might need to contact an FAE if the MLNX-OS software did not load properly.
	System Status LED is amber	Cause: • Critical system fault (CPU error, bad firmware) • Over temperature Solution: • Check environmental conditions (room temperature)
	Fan Status LED is amber	Cause: Possible fan issue Solution: • Check that the fan is fully inserted and nothing blocks the airflow • Replace the fan FRU if needed
	Front PSU Status LED is amber	Cause: Possible PSU issue Solution: • Check/replace the power cable • Replace the PSU if needed
	The activity LED does not light up (InfiniBand)	Make sure that there is an SM running in the fabric.

Problem Indicator	Symptoms	Cause and Solution

System boot failure	The last software upgrade failed on x86 based systems	Solution:
		• Connect the RS232 connector (CONSOLE) to a laptop.
		• Push the system's reset button.
		• Press the ArrowUp or ArrowDown key during the system boot. GRUB menu will appear. For example:
		`Default image: 'SX_X86_64 SX_3.4.0008 2014-11-10 20:07:51 x86_64'`
		`Press enter to boot this image, or any other key for boot menu`
		`Booting default image in 3 seconds.`

Thermal Threshold Definitions

Three thermal threshold definitions are measured by the Quantum™ ASICs, and impact the overall switch system operation state as follows:

- **Warning** – 105°C: On managed systems only: When the ASIC device crosses the 100°C threshold, a Warning Threshold message will be issued by the management software, indicating to system administration that the ASIC has crossed the Warning threshold. Note that this temperature threshold does not require nor lead to any action by hardware (such as switch shutdown).

- **Critical** – 120°C: When the ASIC device crosses this temperature, the switch firmware will automatically shut down the device.

- **Emergency** – 130°C: In case the firmware fails to shut down the ASIC device upon crossing its Critical threshold, the device will auto-shutdown upon crossing the Emergency (130°C) threshold.

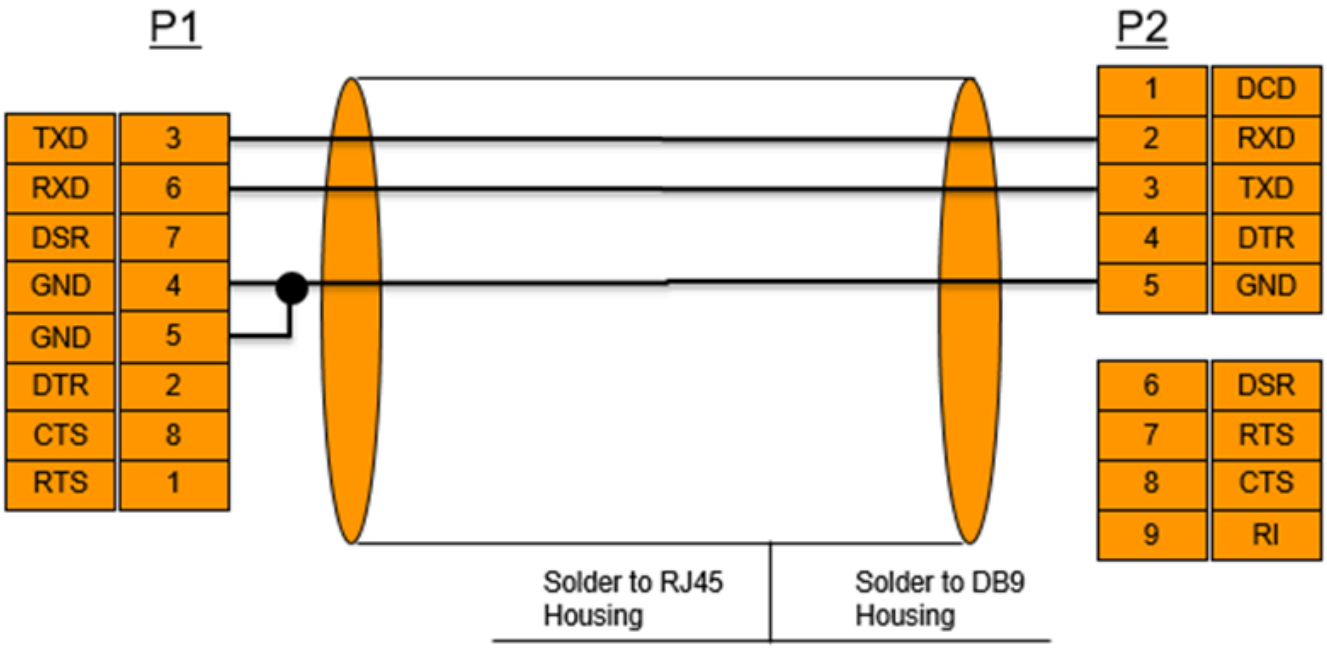
RJ45 to DB9 Harness Pinout

In order to connect a host PC to the Console RJ45 port of the system, a RS232 harness cable (DB9 to RJ45) is supplied.

RJ45 to DB9 Harness Pinout



Warning

RJ-45 Console and I²C interfaces are integrated in the same connector. Due to that, connecting any cable other than the NVIDIA supplied console cable may cause an I²C hang.

Using uncertified cables may damage the I²C interface. Refer to the Replacement Parts Ordering Numbers appendix for harness details.

Disassembly and Disposal

Disassembly Procedure

To disassemble the system from the rack:

1. Unplug and remove all connectors.
2. Unplug all power cords.
3. Remove the ground wire.

4. Unscrew the center bolts from the side of the system with the bracket.

> ⚠ **Warning**
>
> Support the weight of the system when you remove the screws so that the system does not fall.

5. Slide the system from the rack.

6. Remove the rail slides from the rack.

7. Remove the caged nuts.

Disposal

According to the WEEE Directive 2002/96/EC, all waste electrical and electronic equipment (EEE) should be collected separately and not disposed of with regular household waste. Dispose of this product and all of its parts in a responsible and environmentally friendly way.
